

Sports Tuff product gets a makeover!

We are excited to announce that our successful Sports Tuff performance clutch kit range is getting a makeover.

During September 2005, we will be adding more reference numbers to our already extensive range. EXEDY Sports Tuff performance range will also include kits comprising of a Heavy Duty cover assembly, a Cushioned Button clutch disc, and the appropriate release bearing. The result yields enhanced engagement characteristics for both street and performance applications. These kit part numbers are suffixed with **HDCB**, for example **NSK-7050HDCB**.

Also during September 2005, you will notice that the cover assemblies in our Sports Tuff clutch kits will be presented in **Performance Pink**. This will match the colour of our distinctive Sports Tuff kit box and help to create product identification with your customers. To further aid in recognition, all Sports Tuff cover assemblies will have an EXEDY identifying label.

The quality EXEDY Sports Tuff clutch kit products fitted with **VELVETOUCH** brand ceramic friction material from Wellman Products Group USA, the # 1 supplier of ceramic clutch friction material to the Motorsports fraternity, and a major supplier to top OEM clutch manufacturers worldwide, provides a strong marketing advantage for you. In addition, the increased clamp load provided by the Heavy Duty cover assembly results in greater torque capabilities for performance vehicles.

Please contact your local EXEDY office or www.exedy.com.au should you require further information.
