(In stock)

Tech Spot

Tech Note 026 issued August 9, 2007
Toyota Landcruiser fitted with a self adjusting clutch cover.

We have been advised by TMCo. that after installing a self adjusting clutch to FZJ80, FZJ100 & FZJ105 LandCruisers, the method of achieving the correct pedal height and removal of air in the release mechanism is as follows:

Whilst maintaining approximately 2500 RPM, operate the clutch pedal until the ability to select gears is achieved. Drive the vehicle a minimum of ten (10) Kms using the clutch as much as possible.

During this period, the diaphragm will have reached the designed installed height and any air will have been exhausted.

For your convenience Tech Note 026 is included in the relevant kits.

Catalogue Amendments

Hyundai Getz, Page A81

Please add / amend the application information to read as highlighted below.

Getz, 1.3 Ltr, **(O.E. was 200mm)**, 03-10/04, 200 x 22.4 x 20 spline, Clutch Kit HYK-7028, Thrust Bearing BRG2318
